

# Boundary Study Update

# THE PROCESS

**January** - gather information and feedback for possible studies

**February to June** - meet with school councils, consider potential impacts and explore multiple solutions

**July to September** - Follow up mtg with Community Councils and PAC to consider with the board whether to proceed to the next step of the study process, an open house.

**October/November** - Hold an open house for more community feedback

**November/December** - Potential decision on the study

At the June Board meeting  
the *Bennion Jr feeder pattern*  
study was *continued*

## **Bennion Jr. Feeder Pattern**

All of Bennion Elementary and all of Westbrook Elementary feed into Bennion Jr. high.

From there, 50% of the Bennion Elementary students and 100% of the Westbrook Elementary students feed into Cottonwood High School.

The request was made by a community member to consider making the Bennion Junior High boundary feed ONLY into Taylorsville High, thereby making it a clean feeder.

# If Bennion Jr. Were to Feed Entirely Into Taylorsville...

- Taylorsville would realize a net gain of approximately 190 students **over a 3-4 year period.**
- Cottonwood would realize a corresponding net loss of 190 students **over a 3-4 year period.**

# Taylorsville Community Council

In favor of continuing the study into  
the next phase - holding an open  
house

# Cottonwood Community Council

While the Cottonwood Community Council is understandably not eager to lose students they:

- 1) Understand the desires of the Taylorsville community
- 2) Recognize the potential impact to Cottonwood  
and
- 3) Are not opposing the idea

*The Population  
Analysis Committee*  
made a recommendation  
that this study be allowed  
to continue to the open  
house phase

Discussion

Next step?
