Using the scale, assign a number next to each option in order of preference. The number one (1) being the least important to you and the number five (5) being the most important to you. (You may only use each number once.)

\* A weighted average is an average in which each observation in the data set is assigned or multiplied by a weight before summing to a single average value. In this process, each quantity to be averaged is assigned a weight that determines the relative importance of each quantity.
